A Large Farmer in Kansas Says. "I have examined many wheat fields in this section—some where the seed was drilled in—some where seed was broadcasted on corn ground and covered with the Disc Harrow—many fields where the seed was sown broad cast on corn ground and also plowed ground and covered in with the "ACME" Pulverizer, and covered in with the "ACME Pulverizet; Every instance the wheat put in with the "ACME" looks much the best, fully one: third better. The reason for this is clear to anyone who understands the construction of the "ACME" viz.—the "ACME" cuts over the entire surface of the ground between the construction. NO CURE, NO PAY.

Then, too, the action of the leveler and crusher on the "AUME" in compressing the soil has a good influence in hastening the growth of the seed. The great reduction in the price of they "AUME" attracts attention. It sells for less than any other tool of its class and as now made, is a general purpose Harrow. No farmer can afford to do withought. The "ACME" is the best Pulveriser—the chenpest riding Harrow and best seller on
